

Moving Forward at a Glance

You may be interested in more specific information about our intervention program model. We offer a different kind of tutoring: our unique program **combines academic tutoring with social and emotional support** to make long-lasting, integrated interventions with life-changing (and measurable!) results.

- Because we know that when students feel confident about who they are, their academic achievement is positively impacted, we utilize a holistic teaching approach that addresses the **academic and emotional needs** of students.
- Because every school has unique needs, all of our programs are tailored to the specific academic challenges and skill gaps identified by each school's leadership team. Our **programs are custom built** in consultation with schools in order to support their plan for student achievement.
- Our engaging and culturally relevant tutors work with a caseload of students, both **one-on-one** and in **small groups**. Our individualized approach allows not only for more effective academic intervention, but also for meaningful mentoring relationships between students and their tutors.
- We engage students in **emotional asset building** to ensure that they develop the social and emotional skills necessary to be successful in school and in life. Developing emotional skills leads to decreased discipline and increased engagement in the classroom.
- Our students struggle with unique social and emotional issues. To meet the needs of all of our students, we utilize a **social justice lens**. We focus on supporting the development of self-esteem, healthy communication skills, confidence, emotional intelligence, impulse control, and conflict resolution skills. Our programs support safe and positive school culture in a diverse range of communities.
- We know that students learn more when they are engaged and motivated. Our **hands-on, interactive, and academically rigorous program** authentically engages even reluctant and disengaged students, supporting them to reach their potential.
- This holistic approach works! We track our student achievement data carefully, and celebrate our students' successes. Over the past two years, 633 low-income, academically struggling students showed an average of 68% increase in their English language arts skills, and a 70% increase in their mathematics skills! We are proud of our students' success; our program **makes measurable impact on student achievement**.
